

PW Skills Assignment

1) What is Git?

Git is a distributed version control application used by developers to keep and track their changes. This enables multiple people to work on the same code base simultaneously.

Git also helps identify the merge conflicts and suggest resolution. Git when integrated with a release pipeline helps to automate the release process as well.

2) What do you understand by the term version control?

3) What is Github?

4) Mention some popular git hosting service?

5) Different Types of version control systems.

6) What benefits come using git?

7) What is a git repository?

8) How can you initialize a repository on git?
